MEMORANDUM FOR: Chief, Military-Economics Division, OMR

ATTENTION: [REDACTED]

FROM: Chief, CIA/PID (NPIC)

SUBJECT: Leningrad Electronics Sites and Their Suspect ABJ Annotation(s)

REFERENCES: (a) Requirement C-PM-3-80,516
(b) CIA/PID Project C 1192-63

1. This memorandum is in response to your requirement dated 27 August 1963 requesting the construction timing sequence of the three Leningrad Electronics Sites.

2. The varying quality of photography on existing photography hampers a conclusive interpretation of the construction sequence of these facilities. The Northeast site was probably complete by [REDACTED] though the fair quality photography will not permit a confirmed analysis. However, on the basis of good quality photography of [REDACTED] it is possible that the site was complete. No negation date can be established for this site. On poor quality photography of [REDACTED] however, the road into this site was visible.

The South Southeast site was probably complete by [REDACTED]. This photography was of fair quality, however, and final confirmation of the site's completion must be based upon the good quality photography of [REDACTED]. This site area was covered on [REDACTED] photography, but the site was not present though the road leading to its present location was visible. On [REDACTED] the site was cloud covered, though the main access road (noticeably improved since 1956) was present.

The Southwest site was also probably complete by [REDACTED]. Again final determination of the site status cannot be made until [REDACTED] when the site is definitely complete. No negation date can be established for this site since it was cloud covered or not covered on every [REDACTED] mission prior to [REDACTED]. The road pattern into the site, however, was observed on [REDACTED].

3. The photo analyst on this project is [REDACTED] who may be contacted on extension [REDACTED] should any questions concerning this project arise.

4. This project is considered to be complete.
